

ERIC SOMOGYI - CYBERSECURITY ENGINEER

773-708-1846 | hire-eric-somogyi@pm.me | 4502 E Paradise Vlg Pkwy, Phoenix, AZ, 85032

<https://www.credly.com/users/eric-somogyi> | <https://github.com/stubbyguy/resume>

TECHNOLOGIES

- Azure, AD/Entra, AWS, GCP, M365, macOS, vSphere, Citrix, Windows DataCenter/Server, Teams, SharePoint, IAM, MDM, VDI, IDaaS, Server/Cloud/SaaS Backup Management,
- K8s, Docker, Terraform, Ansible Network Automation, Puppet Automation, ServiceNow, Autotask, Ninja
- Python, Typescript, Ruby, Go, Bash, scripting languages, Linux CLI, JIRA, Zoom Business, Slack, Powershell scripting,
- SD-WAN Administration, EDR/SIEM/SOAR/XDR's, VPN Configuration, DHCP, DNS, TCP/IP, Routing Protocols: OSPF/BGP/EIGRP/MPLS/HSR P
- Cisco CLI, VLAN/VXLAN configuration, NVIDIA Container Toolkit and provisioning in Docker
- Unix/Linux hardening, Firewall Configuration (Cisco, Palo Alto, Sophos, Fortinet)
- CI/CD & DevOps: Pipeline Architecture, Blue/Green Testing, GitOps Workflows, Jenkins Automation, REST API Integration | Linux Platforms: SUSE, Debian, Ubuntu, RHEL, CentOS
- Agile methodology, Change and configuration management, Incident Response, Splunk
- OWASP Top 10, MITRE ATT&CK, Risk Assessments, Pen-testing, Vulnerability/Risk Assesments.
- ITIL, NIST 800-53, HIPAA, SOX, GDPR, CSF, COBIT, PCI-DSS 4.0

SOFT SKILLS

- Collaboration and partnership, Strong verbal and written communication skills, Detail Oriented, Organizational skills

WORK EXPERIENCE

Systems Administrator | TEAM LOGIC IT | Scottsdale, AZ | Sept 2025 – present

- Deployed and managed Microsoft Intune-based device enrollment integrated with Entra ID Conditional Access policies; administered on-premises Active Directory Domain Services (AD DS), including DNS, Group Policy Objects (GPO), NAS, and Windows Server infrastructure, with PowerShell automation for compliance reporting and operational efficiency.
- Performed SOC-level security operations leveraging Microsoft Defender XDR for real-time threat monitoring, alert triage, and incident remediation; administered Microsoft Purview Data Lifecycle Management (DLM) policies, implemented Entra ID Identity Protection controls, and executed proactive threat hunting and disaster recovery planning.
- Configured, maintained, and troubleshot enterprise IP routing and switching infrastructure, including VLAN segmentation, inter-VLAN routing, Spanning Tree Protocol (STP), and Layer 2/3 protocol management across multi-site client environments.
- Orchestrated enterprise VoIP infrastructure migrations from legacy PSTN carriers to Zoom Phone, encompassing number porting verification, dial plan design, call flow testing, and phased cutover coordination to guarantee zero business disruption throughout transition.
- Implemented Zero Trust Architecture (ZTA) and enforced Principle of Least Privilege (PoLP) access controls across identity, endpoint, and network layers using Entra ID Conditional Access and Microsoft Intune compliance policies to harden organizational security posture and minimize attack surface.
- Administered Microsoft 365 enterprise tenant environments encompassing Exchange Online, SharePoint Online, OneDrive, Microsoft Teams, and Microsoft 365 Copilot; managed license provisioning, retention policies, eDiscovery configurations, and hybrid identity integration.
- Delivered end-to-end infrastructure support spanning OSI Layers 1–3, including Windows Server administration, physical rack installation and structured cabling, and enterprise network design and documentation for SMB and mid-market client deployments.
- Managed vendor relationships and coordinated technical escalations with ISPs and third-party service providers to resolve complex infrastructure incidents, support procurement decisions, and maintain SLA compliance

Masters of Science: Cybersecurity | Depaul University | Chicago, IL | 2023 – 2025 | In-person Full-Time

- Executed full-lifecycle ethical penetration testing engagements encompassing Windows authentication attacks, Active Directory privilege escalation, and OWASP Top 10 web application exploitation; simulated adversary TTPs mapped to the MITRE ATT&CK framework in defensive exercises and CTF competitions.
- Gained advanced proficiency in Linux security hardening, iptables/nftables rule design, sudo privilege management, SSH key-based authentication enforcement, and host-level audit compliance against CIS Benchmarks.
- Architected enterprise and ISP-grade networks incorporating Zero Trust principles, micro-segmentation, VLAN design, BGP routing, and identity-aware access controls across hybrid on-premises and cloud environments; produced formal technical specification and design documentation aligned with NIST and ISO 27001 frameworks.
- Translated stakeholder business requirements into detailed network architecture diagrams, security control mappings, and implementation plans; authored information security policies, standards, and procedures in accordance with NIST CSF, CIS Controls, ISO 27001, PCI-DSS, and SOC 2 compliance frameworks.
- Deployed, configured, and governed cloud security controls across AWS and Microsoft Azure environments, implementing IAM least-privilege policies, security groups, VPC/VNet segmentation, and compliance guardrails within hybrid cloud architectures.
- Integrated automated security controls into CI/CD pipelines using Jenkins and GitHub Actions, enforcing policy-as-code, static application security testing (SAST), secrets management, and compliance scanning to ensure auditable and secure infrastructure deployments.
- Conducted red/blue/purple team operations and adversary emulation exercises utilizing the MITRE ATT&CK framework to identify detection coverage gaps, validate existing security controls, and improve SOC incident response playbooks and detection engineering capabilities.
- Deployed containerized workloads using custom Docker images and automated infrastructure provisioning via Ansible playbooks and Jenkins CI/CD pipelines; integrated Python and Bash scripting with SIEM platforms for log aggregation, correlated threat detection, and automated incident response workflows.

Network Infrastructure Technician / Supervisor | IATSE Local 2 | Chicago, IL | 2015 – 2023

- Supervised and directed cross-functional crews of 5–20 IATSE union engineers, electricians, and riggers across large-scale live production environments; managed shift scheduling, task prioritization, and on-site safety compliance for high-profile corporate, broadcast, and live entertainment events.
- Served as primary technical liaison to venue operations teams, general contractors, and end clients; managed scope and change order coordination, resolved multi-trade technical escalations, and ensured all deliverables met contractual specifications and production timelines.
- Deployed and configured production-scale server infrastructure, managed network switches, and integrated hardware systems within live event environments, supporting large-scale A/V signal distribution, communications routing, and on-site IT operations.

CERTIFICATIONS

Active Certifications

- GitHub Foundations • Microsoft Azure AZ-900 • Microsoft Azure SC-900 • Microsoft Azure AI-900 • AWS AI Practitioner • AWS Cloud Practitioner • AWS Solutions Architect Associate • Google IT Support Professional • NVIDIA Associate AI Infrastructure & Operations

Certifications In Progress

- Certified Kubernetes Administrator (CKA) • HashiCorp Terraform Associate • NVIDIA Professional AI Infrastructure, Operations & Networking

Awards & Competitions

- 3rd Place – NYU CSAW International Cybersecurity Competition (Cyber Policy): “Security for AI Computing with Nvidia Technologies” — www.csaw.io/cyber-policy-competition
- Northwestern University WildHacks Hackathon — <https://devpost.com/software/inview-d9tnhw>

Cloud, Infrastructure Automation, DevSecOps, IAM

- In Self-host lab environment, deployed K8s across AWS and Azure environments, designed using Terraform and deployed from VS Code into AKS and EKS.
- Designed and implemented Jenkins-based CI/CD workflows for containerized applications, integrating automated security scanning and compliance checks to achieve consistent, auditable releases aligned with enterprise standards.
- Developed custom Docker images and orchestrated Ansible playbooks alongside python/bash scripts to streamline log analysis and vendor-agnostic incident response workflows.
- Implemented custom API integrations to automate complex system workflows and tasks, significantly reducing manual effort and driving operational efficiency . *(TeamLogic)*
- Engineered hybrid cloud security controls and deployed AWS services (EC2, S3, VPCs, IAM) designing Lambda functions for event-driven architecture and implementing GuardDuty and Amazon SNS notifications into a Slack channel.
- With Terraform, provisioned AWS cloud infrastructure (EC2, S3, EFS, VPC, Lambda, Event Hub, GuardDuty, Shield, WAF, IAM). Provisioned Azure Infrastructure with ARM Templates and Terraform.
- Containers & CI/CD: Docker (Multi-stage builds, custom image deployment) and Jenkins (Pipeline orchestration).
- Ansible playbooks and Puppet Enterprise (Configuration/Patch Management), and Jinja templates.
- Designed and led enterprise identity reference architecture spanning Active Directory, Microsoft Entra ID, SAML/OIDC/OAuth federation, Conditional Access, and MFA/passwordless authentication
- Designed and implemented AI platforms (including LLMs from Bedrock/Foundry), including data governance, model integrity, access control, and adversarial threat mitigation.

Network Engineering & Telecommunications

- Implemented enterprise SD-WAN solutions utilizing Cisco Meraki MX orchestrating dynamic routing via BGP over Auto-VPN to enable resilient site-to-site communication across distributed branch offices. *(TeamLogic)*
- Engineered secure enterprise networks by configuring advanced L3 Access Control Lists (ACLs), Rapid Spanning Tree Protocol (RSTP), and highly available SSID mesh topologies.
- Palo Alto PA-400 Series, Cisco 8200/8300 Series, Fortinet (FortiGate 40F/400F), Sophos XGS 87 NGFW, and Ubiquiti (UXG-Pro, Dream Machine), Multi-branch SD-WAN configuration in Ubiquiti Site Magic. *(TeamLogic)*
- Designing Azure host pools, VM's, Vnets, Site-Site VPNs, AVD, VPN Gateway and integrating with Windows Server Datacenter + DNS/DHCP/Static configuration in domain controller, and GPOs/AD/advances Firewall rules. *(TeamLogic)*
- IoT Networking: MAC Protocols (TDMA/FDMA, CSMA/CD/CA), 6LoWPAN, RFID, Sensor-oriented mesh topologies, and clustering algorithms.

Cybersecurity, Risk & Threat Intelligence

- Established comprehensive Data Security Posture Management and Microsoft Purview Data Loss Prevention (DLP) policies to secure sensitive organizational data and monitor AI-agent integrations. *(TeamLogic)*
- Configured and enforced unified endpoint security policies across enterprise Windows, macOS, and Linux systems. *(TeamLogic)*
- Deployed Microsoft Sentinel workspaces mapped to the MITRE ATT&CK framework analyzing vulnerabilities and orchestrating threat mitigation. *(TeamLogic)*
- Able to administrate Okta/CyberArk privileged SSO with remote systems.
- Integrated Datadog with the Datadog Agent monitoring across AWS and Azure environments via APIs for real-time SIEM infrastructure observability and centralized log parsing.
- Enterprise system hardening and network defense strategies. *(TeamLogic)*
- Comprehensive IT risk governance by conducting qualitative and quantitative risk assessments, vulnerability assessments, and cost-benefit analyses for enterprise security infrastructure.
- Authored and maintained comprehensive technical specification documents, by translating complex user requirements into actionable Information security policies and implementation plans. *(TeamLogic)*
- Security Operations: Microsoft Sentinel, Splunk Enterprise file systems analysis and threat hunting, Microsoft Defender, IDS/IPS. *(TeamLogic)*
- Forensics & Analysis: Wireshark Packet analysis, Program/file analysis with Ghidra, Sleuth Kit, Binary Ninja, hexdump, df, grep/regex, and partition table analysis.
- Hacking tools: Kali Linux Tools, Metasploit, msfvenom, Burp Suite, Mimikatz, Empire C2, Meterpreter, many GitHub tools, and Kerberos/Golden Ticket exploitation techniques, any open source tools + Github.
